Take Down Strand Labeling

New 2023 process for labeling and storing individual light strands that corresponds with the take down map.

Order Colored Clips from Amazon:

- We no longer use colored duct tape for labeling individual light strands
- These new color-coded clips are less noticeable and still do the same job
- The colored clips need to match the same colors listed in the take down app
- Link to order on Amazon: <https://a.co/d/7mAK6dy>

Label the strands the same color on the map in the take down app:

- As you use the take down app and work from left to right, you will draw the strands a specific color on the map. Attach the same color of clip to the actual strand near the end plug.
- Place strands in the storage tub in order from left to right so it makes sense for the following reinstall.
